Morse Code is a system for representing letters of the alphabet, numerals, and punctuation marks by arranging dots, dashes, and spaces. The codes (1) ... (TRANSMIT) through a telegraph machine, which converts the symbols into electrical signals and sends them across a wire to their destination. The signals are then converted back into the message by the telegraph that receives (2) ... (THEY). Morse Code can also be sent through visual signals, such as flashing lights.

Morse Code (3) ... (INVENT) in the United States by Samuel F.B. Morse during the 1830s and was further improved by Alfred Vail, Morse's assistant and partner. Soon after its introduction in Europe, it became apparent that the original Morse Code was not able to transmit all non-English texts, since it (4) ... (LACK) codes for letters with diacritical marks (such as an umlaut or a tilde). As a solution, a variant (5) ... (CALL) the International Morse Code was devised by a conference of European nations in 1851. This newer code is also called Continental Morse Code.

The two (6) ... (SYSTEM) are similar, but the International Morse Code is (7) ... (SIMPLE) and more precise. The International Morse Code (8) ... (REMAIN) the same since it was created. It was used heavily by the shipping industry and for the safety of the seas up until the early 1990s.
